

# Career Quest

**Name: Dawood Tanvir**

## Overview

Career Quest is a Fast API based job searcher that takes a json with keys Position, Experience, Salary, Job Nature, Location and Skills as an input and returns all the relevant jobs with their links.

## Sites used for collecting job data

1. LinkedIn
2. Indeed
3. Glassdoor

## Workflow

Based on user's input the relevant job data is scraped from linkedin, indeed and glassdoor. First the links of jobs are collected then the complete details are collected following the links. Following are the screenshots of data extraction:

```

The data is saved in a json file which will be used as a context to LLM.

The LLM used for this purpose is deepseek-r1-distill llama 70b imported using api from Groq. The json data is passed to LLM in a batch of 3 as big batches cause “Request too large for LLM” error. The LLM filters out relevant jobs according to the input given by the user such as “skills”. The final result is sent to Fast API localhost. Following are the screenshots of Fast API request and response:

# Request
